

Data Center Project Management

How do you manage a critical depot of data information in an off-site co-location facility for a major worldwide financial investment firm? It all begins with organization.

EPS was faced with the challenge to design, manage, and coordinate the implementation of this state of the art site.

EPS took on the challenge to develop and maintain the day-to-day operations of this heavy trafficked Data Center. With care and professionalism that is the EPS trademark, we succeeded in managing a myriad of aspects in the UPS and cooling systems, management of the racks and cabling, and established a formal procedure with regards to data room access and equipment implementation.

In addition to reducing the operating cost and more importantly operational liability, we ensured the careful utilization and management by creating scheduled timing and procedures for work orders, and access restrictions.

Another satisfied client... another ground-breaking milestone for EPS.
