

Ethicon, Inc. a Johnson & Johnson Co.

For several years, Economic Project Solutions, Inc. has provided various services to Ethicon, Inc. including: Space Planning, Facilities Engineering and OSHA / Fire / Safety Consulting & Training.

EPS continues to organize Ethicon's Safety Training Program according to federal regulations and Johnson & Johnson Corporate Guidelines. These corporate guidelines are more stringent than the Occupational Safety & Health Administration, leading EPS to complete a comprehensive study in order to accurately survey the current practices of the client. After conducting this thorough analysis, EPS was charged with reviewing, writing and training personnel on all new and revised federal and corporate requirements.

Another challenge met head-on by EPS was getting employees into the classroom while keeping production loss to a minimum. The issue was tackled by utilizing only one hour per month for training. A customized schedule was developed to ensure that all twenty-one annual training requirements were met within that one-hour-a-month window.

In addition, EPS also schedules and facilitates all safety meetings and maintains municipal relationships on behalf of our clients. This allow the coordination of all training involving local fire departments including, but not limited to, confined space and fire training.
