## Integra LifeSciences

True checks and balances are the success of every project! That's why Integra LifeSciences called upon EPS for a multitude of design and validation projects. When faced with the dilemma of designing equipment fabrication for Integra LifeSciences' Engineering Department, EPS stepped up to the challenge by not only designing the manual cutter for collagen sponge products but EPS created the CAD drawings, Quality Plan, Validation, and SOP.

In addition, EPS designed new packaging for shipping products and developed a testing protocol in accordance with ISTA standards and validated a new package.

EPS achieved Integra LifeSciences' goal by increasing the allowable shipping time for this perishable product without compromising the integrity of the product and significantly reduced the cost savings by utilizing more economical shipping methods.

EPS' goal for all of our clients is, "Thinking beyond tomorrow to accomplish your economic needs for today!"
